

ETH 30D Senior Vault

A review sheet for the sample vault ETH-30D-S

Review the market, tranche, timing, and settlement order before you decide whether this example fits your risk preference. The values below are representative demo data for ETH-30D-S.

ANNUALIZED ESTIMATE	DURATION	JUNIOR LOSS BUFFER
8.40%	30 days	30%
Estimate only	Ends Oct 8, 2026	First-loss layer

Vault terms

Market and network	ETH / USDC on Ethereum
Tranche	Senior
Duration and end date	30 days / Oct 8, 2026
Price range	\$2,800 - \$4,200
Funding capacity	\$2,000,000 total / \$1,240,000 funded / \$760,000 sample space
Payment order	Senior paid before Junior from final vault value
Annualized estimate	8.40% estimate, not guaranteed
Loss buffer	30% Junior first-loss layer; it can run out

Settlement order

Both tranches share one final vault value and end date. Senior receives payment first. Junior receives what remains and takes the first loss. The buffer can reduce Senior exposure, but it cannot remove all risk.

01 SENIOR Paid first Paid from available final vault value	02 JUNIOR Paid after Senior Receives residual value and takes first loss

Review checklist

Use this page to record your review of the example terms. Check each item when you can explain it in your own words.

☐	Market and network match the intended position: ETH / USDC on Ethereum.
☐	Tranche role is clear: Senior is paid before Junior.
☐	Term is acceptable: 30 days, ending Oct 8, 2026.
☐	The sample range is understood: \$2,800 - \$4,200.
☐	Loss boundary is understood: Junior covers first losses, but the 30% buffer can run out.
☐	Capacity is understood: \$1.24M funded of \$2.0M capacity; \$760k remains in this sample.
☐	The estimate is understood: 8.40% is annualized and illustrative, not guaranteed.
☐	The product boundary is clear: this preview uses demo financial operations.

Curator notes

Record the questions, assumptions, or items to verify before review.

Operational context

Wallet sign-in uses a real externally owned account signature through Sign-In with Ethereum (SIWE). Financial operations in this preview are browser-local simulations. No live contracts, backend balances, transaction, or token approval are used. This factsheet is an illustrative review aid; it does not state that a deposit is live or audited.
